• CD Player Service Precautions

1. Since these screws protect the mechanism during transport, be sure to affix it when it is transported for repair, etc.
2. For pickup unit (CGY1015) handling, please refer to "Disassembly" (Fig. 4) During replacement, handling precautions shall be taken to prevent an electrostatic discharge (protection by a short pin).
3. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.

SAFETY INFORMATION (UC, US MODEL)

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5). When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

SAFETY INFORMATION (EW MODEL)

1. Safety Precautions for those who Service this Unit.

- Follow the adjustment steps (see pages 13 through 35) in the service manual when servicing this unit. When checking or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.

Caution:

- During repair or tests, minimum distance of 13cm from the focus lens must be kept.
- During repair or tests, do not view laser beam for 10 seconds or longer.

- A "CLASS 1 LASER PRODUCT" label is affixed to the bottom of the player.

- The triangular label is attached to the mechanism unit plate unit.

4. Specifications of Laser Diode

Specifications of laser radiation fields to which human access is possible during service.

1. ADJUSTING VOLUME AND TONE

Adjusting Volume

Pressing the (+) side of button ① increases the volume, while the (-) side decreases it.

V-15

Adjusting the Fader

This function controls the balance between the front and rear speakers of a 4-speaker system. Pressing the (+) side of button ① shifts the balance to the front speakers, while the (-) side shifts it to the rear speakers. For 2-speaker systems, set FAD 0.

FAD0

Adjusting Bass

Pressing the (+) side of button ① increases bass, while the (-) side decreases bass.

BAS0

Adjusting Treble

Pressing the (+) side of button ① increases treble, while the (-) side decreases treble.

TRE0

Adjusting Balance

Pressing the (-) side of button ① shifts the balance to the left speaker, while the (+) side shifts it to the right speaker.

BAL0

Switching Power On

Tuner

Press button ⑥ to switch the tuner power on. Press button ⑥ again to switch the power off.

CD Player

When a disc is inserted half-way into the disc insertion slot ③ with its label side upward, the disc is automatically loaded and played.

To remove the disc, push button ④.

Changing the source

To change the source, push button ⑥ with the disc inserted in the slot. At each press of the button, the source changes as follows: CD Player-Tuner-OFF

Note that if you press button ⑥ to halt playing, the disc resumes playing with about the remainder when set to start again.

Adjusting Audio

When the display indicates disc or tuner, press button ① to adjust the volume. Each press of button ⑤ changes the display and the function of button ① as follows:

Volume→Fader→Bass→Treble→Balance

- When you're adjusting fader, bass, treble, or balance settings, the indicator will stop at the center setting. About 5 seconds after adjustment has been made, the display returns to its previous state.

Using the Loudness Function

Press button ⑤ for about two seconds and the "LOUD" indication will appear on the display. This loudness function lets you enhance both high and low frequencies to give a more natural sound at low volumes. To cancel this function, press button ⑤ again for about two seconds.

Switching Illumination Colour

You can select either green or amber for the switch illumination colour. To switch the colour, hold down button ② for two seconds.

2. USING THE RADIO

1 Press Button ① to switch the radio power on.

2 Press Button ② to select a band.

$F_1 \rightarrow F_2 \rightarrow F_3 \rightarrow M$
(FM1) (FM2) (FM3) (AM)

3 Use seek tuning to tune in a frequency.

Confirm that the SEEK indicator ① is shown on the display (if not, press the (+) and (-) sides of button ③ at the same time). Press the (+) side of button ③ to automatically tune in the next higher receivable frequency, and the (-) side for a lower frequency.

4 Adjust volume and tone (see page 5).

5 Assign the tuned frequency to one of the Buttons in Bank ⑦ (preset memory).

Press and hold down one of the buttons in Bank ⑦ for at least two seconds. The frequency is assigned to the selected button when the preset number ① stops flashing on the display. Up to 18 FM stations (6 each for FM1, FM2 and FM3), and six AM stations can be assigned to the preset memory buttons in Bank ⑦.

6 Once a frequency is assigned to a Button in Bank ⑦, you just need to press that Button to tune it in.

This also causes the number of the button pressed to appear at Position ① on the display.

Preset Scan Tuning

This function lets you automatically monitor the stations assigned to the preset buttons.

1. Press the button ④, and the preset number ① flash. Each station assigned to the buttons in Bank ⑦ will be automatically tuned in for about eight seconds.
2. When you hear a station that you like, press button ④ again to cancel preset scan tuning and remain at that station.

BSM (Best Stations Memory)

This function automatically locates stronger stations and automatically assigns their frequencies to the buttons in Bank ⑦, from strongest to weakest. It comes in handy when trying to find local stations while driving.

1. Press button ② and select a band.
2. Hold down button ④. After about two seconds, a "beep" will sound to signal that the BSM search has started. At this time, " - - - - " will flash on the display.

3. The frequency display will return once BSM search is complete, and frequencies are assigned to buttons 1 through 6 in Bank ⑦.
- At the end of the BSM search, the displayed frequency is that assigned to button ① of Bank ⑦.
- If there are fewer than six strong stations in the area, some of the buttons in Bank ⑦ will not be assigned frequencies, so they will retain any frequencies assigned to them previously.
- BSM search may take as long as 30 seconds in areas where there are few strong stations.
- You can cancel BSM search by pressing button ④ again.

Manual Tuning

Use manual tuning when stations are too weak to be picked up by seek tuning.

1. Press both (+) and (-) sides of button ③ simultaneously to illuminate "MANU" ①.
2. Each press of the (+) side of button ③ increases the frequency in 0.2 MHz steps in the FM band, 10 kHz in the AM band. Pressing the (-) side of button ③ decreases the frequency. Holding down either side of button ③ changes the frequency at high speed.

Switching between FM Stereo and Mono

Generally, it is best to allow the "Super Tuner III" function to automatically set the optimum listening conditions. When there is a large amount of noise, you can press button ⑥ for clearer mono reception ("MONO" ① will appear on the display).

Adjusting Seek Sensitivity

The seek tuning function of this tuner lets you select between a local setting for reception of strong stations only, and a DX (distant) setting for reception of weaker stations. The local setting also has four seek tuning sensitivity levels for FM and two levels for AM to match local conditions.

Changing the Local Seek Sensitivity

1. Use button ② to select a band.
2. Hold down the button ⑤ for more than two seconds, and the display will show you the current local seek sensitivity for about five seconds.

(Example: LOC-2)

3. While the local seek sensitivity remains on the display, press the (+) side of button ③ to increase the sensitivity level, and the (-) side to decrease the level as shown below.

FM: LOC-1⇌LOC-2⇌LOC-3⇌LOC-4

AM: LOC-1⇌LOC-2

The LOC-4 setting allows reception of only the strongest stations, while lower settings let you receive progressively weaker stations.

- The display of local seek sensitivity returns to the frequency when about five seconds have elapsed after the change of sensitivity.

Switching between Local and DX

Press button ⑤ to switch between Local and DX (distant) seek tuning. When "LOC" ⑥ is shown on the display, seek tuning is performed with the local seek sensitivity. Otherwise, seek tuning is performed with the DX seek sensitivity.

3. USING THE CLOCK DISPLAY

Displaying the Time

The clock is displayed while button ③ is depressed.

Press button ③ again to turn off the clock display.

- The Time Display functions only when power is on.

Adjusting the Time

Adjusting the Hours

While holding down button ③, press button ① to adjust the hour setting of the clock. Each press of button ① advances the hour setting by one hour, and holding it down advances the setting at high speed.

Adjusting the Minutes

While holding down button ③, press button ② to adjust the minute setting of the clock. Each press of button ② advances the minute setting by one minute, and holding it down advances the setting at high speed.

4. PLAYING COMPACT DISCS

- When a disc is inserted half-way into the disc insertion slot ③ with its label side upward, the disc is automatically loaded and played.

(Track number ⑨ and disc run ⑧ indications will appear on the display.)

- Use track number search to select a track.

See that no "MANU" ⑬ illuminates on display. If it does, then turn it off by pressing the (+) and (-) sides of Button ② simultaneously. Press the (+) side of button ② to increase the number at position ⑨, or the (-) side to decrease the number. Holding either side of button ② down changes the track number at high speed.

- Adjust volume and tone (see page 5)

- To eject or change the disc, press Button ④.

If an ejected disc is pushed back into the slot, it will be loaded and played again.

Note:

- If a disc can only be inserted halfway, or if the disc does not play after being loaded, something may be wrong with the disc. Eject the disc by pressing button ④, and check it. If it is all right, insert it again.
- Insert the disc with its label (printed) side facing up. If the disc is inserted with the label side facing down, it will not play, and the recorded side may be damaged.
- Do not insert two discs into the slot at the same time. This may cause a malfunction.

Using Highlight Scan

Highlight Scan is designed to enable you to conveniently scan all pieces of music contained in the disc by playing 10 seconds each at your designated point of time after the start of the music. The starting time of play is set at one minute in factory. Therefore, the Highlight Scan begins one minute after the start unless you designate it otherwise.

When you do not want to change the factory-set time:

1. Press Button ⑤, and "SCAN" ⑩ will illuminate.
2. The contained pieces of music will be played in sequence for 10 seconds each one minute after the beginning.
3. Press Button ⑤ again when your selected piece comes, and it will continue to play. At this point, the Highlight Scan discontinues to operate.
- The previous function automatically resumes when a piece of music with which Highlight Scan began returns.

Changing the Starting Time of Highlight Scan

When you want to set the starting time of the Highlight Scan to 30 seconds:

1. Press Button ②, (+) and (-) sides simultaneously, and "MANU" ⑪ will illuminate and time numerals will be displayed.
2. Keep pressing either (+) or (-) side of Button ② until the numerals reaches 30.

3. Hold down Button ⑤ for two or more seconds, and "SCAN" ⑩ will illuminate and the Highlight Scan will begin 30 seconds after the start of the next piece of music.

- The starting time of Highlight Scan can be designated at ten or tens of seconds only. A tenth or tenths of seconds can be disregarded.
- If a piece of music ends before your designated point of time at which Highlight Scan starts, the scanning is performed for its beginning 10 seconds.
- If a piece of music lasts less than 10 seconds, so does the Highlight Scan.
- You may wish to change the starting time longer without suspending the function. You may do so, however, only to a relatively long-playing piece of music because, as a matter of course, the time cannot be set so as to come after the end of the music.

Using Random Play

This function uses the built-in microprocessor to randomly play tracks from the disc.

1. Press button ⑥. "RDM" ⑪ will appear on the display. Once the current track has been played, the microprocessor will randomly select the next track.
2. To cancel random play, press button ⑥ again.

Using Music Repeat

This function lets you listen to a track as many times as you wish.

1. While the track you want to repeat is playing, press button ⑦. "REP" ⑪ will appear on the display. Now the track will repeat until the music repeat function is canceled.
2. To cancel music repeat, press button ⑦ again.
- When music repeat is not operational, the whole disc will be played repeatedly.

Using Fast Forward and Reverse

1. Press simultaneously both (+) and (-) sides of the button ② "MANU" ⑪ will appear on the display. At this time the display will show the amount of elapsed disc play time.

2. Press the (+) side of button ② for fast forward, and the (-) side for reverse.
- Sound is output during fast forward and reverse operations.
- When a disc in which there are several seconds between tracks is used, the amount of elapsed disc-play time is shown, for example, as -0*02 and -0*01.

5. CONNECTING THE UNITS

- Before making final connections, make temporary connections then operate the unit to check for any connecting cord problems.
- Refer to the owner's manual for details on connecting the various cords of the power amp and other units, then make connections correctly.
- Be sure to connect the memory power supply lead (orange) to a terminal that is always supplied with power regardless of the vehicle's ignition switch position. If this connection is made incorrectly or is forgotten, the unit will not work at all.
- Don't pass the orange lead through a hole into the engine compartment to connect to the battery. This will damage the lead insulation and cause a very dangerous short.
- Since a unique BPTL circuit is employed, never wire so the speaker leads are directly grounded or the left and right speaker ⊖ leads are common.
- Speakers connected to this unit must be high-power types possessing minimum rating of 25W and impedance of 4 to 8 ohms. Connecting speakers with output and/or impedance values other than those noted here can damage the speakers.

2/4-speaker system

- When using only a single power amp (sold separately), connect the rear output cord to the main amp.

External 4 channel amp system

- Optional front speakers can be connected as illustrated with in the "---", to make it a 6-speaker system.
In this case, fader function of this unit will control the volume balance between the four front speakers and the two rear speakers.

7. DISASSEMBLY

● Removing the Case

1. Insert and turn a flat screwdriver to remove the case.
2. Raise the case to remove.

Fig. 1

● Removing the Grille Assy (DEH-660/UC, 630/US, 610/ES)

1. Press the tabs at three locations indicated by arrows, and then pull out the grille assy.
2. Disconnect the connector.

Fig. 2-2

● Removing the Grille Assy

(DEH-770/UC, EW, 760/UC, EW, 85/US, 710/ES, 770SDK, 760SDK/WG)

1. Press the tabs at three locations indicated by arrows, and then pull out the grille assy.
2. Disconnect the two connectors.

Fig. 2-1

● Removing the Display Unit

(DEH-770/US, EW, 760/UC, EW, 85/US, 710/ES, 770SDK, 760SDK/WG)

1. Remove the four screws, and then remove the grille.
2. Pull out the display unit.

Fig. 3

● Removing the CD Mechanism Unit

1. Remove the four screws.
2. Disconnect the two connectors, and then remove the CD mechanism Unit.

Fig. 4

NOTE: When remove the flexible p.c. board, always insert a shorting pin or insert an inter-pattern short (jumper) before disconnecting the flexible p.c. board from the connector.

● Removing the CD Tuner Unit

1. Remove the screw D, and then remove the holder.
2. Remove the screw E and F.
3. Remove the screw G, and then remove the holder.
4. Unbend the tabs at five locations indicated by arrows until straight.
5. Raise up on CD tuner unit to remove it from chassis unit.

Fig. 6

● Removing the Amp Unit

1. Remove the four screws A, and the four screws B.
2. Remove the amp unit.

Fig. 5

8. ADJUSTMENT

1) Precautions

• This unit uses a single power supply (+5V) for the regulator. The signal reference potential, therefore, is connected to pin No. 21 (approx. 2.5V) of IC 351 (CXA1081Q) instead of GND. (VC or VREF at test point)

If VC and GND are connected to each other by mistake during adjustments, not only will it be impossible to measure the potential correctly, but the servo will malfunction and a severe shock will be applied to the pick-up. To avoid this, take special note of the following.

Do not connect the negative probe of the measuring equipment to VC and GND together. It is especially important not to connect the channel 1 negative probe of the oscilloscope to VC with the channel 2 negative probe connected to GND.

And since the frame of the measuring instrument is usually at the same potential as the negative probe, change the frame of the measuring instrument to floating status.

If by accident VC comes in contact with GND, immediately switch the regulator or power OFF.

- Always make sure the regulator is OFF when connecting and disconnecting the various filters and wiring required for measurements.
- Before proceeding to further adjustments and measurements after switching regulator ON, let the player run for about one minute to allow the circuits to stabilize.
- Since the protective systems in the unit's software are rendered inoperative in test mode, be very careful to avoid mechanical and /or electrical shocks to the system when making adjustment.
- Test mode starting procedure
Turn ACC and Back-up ON while pressing the VOL+ and VOL- keys together.
- Test mode cancellation
Turn ACC and Back-up OFF and then back ON.
- Disc detection during loading and eject operations is performed by means of a photo transistor in this unit. Consequently, if the inside of the unit is exposed to a strong light source when the outer casing is removed for repairs or adjustment, the following malfunctions may occur.

*During PLAY, even if the eject button is pressed, the disc will not be ejected and the unit will remain in the PLAY mode.

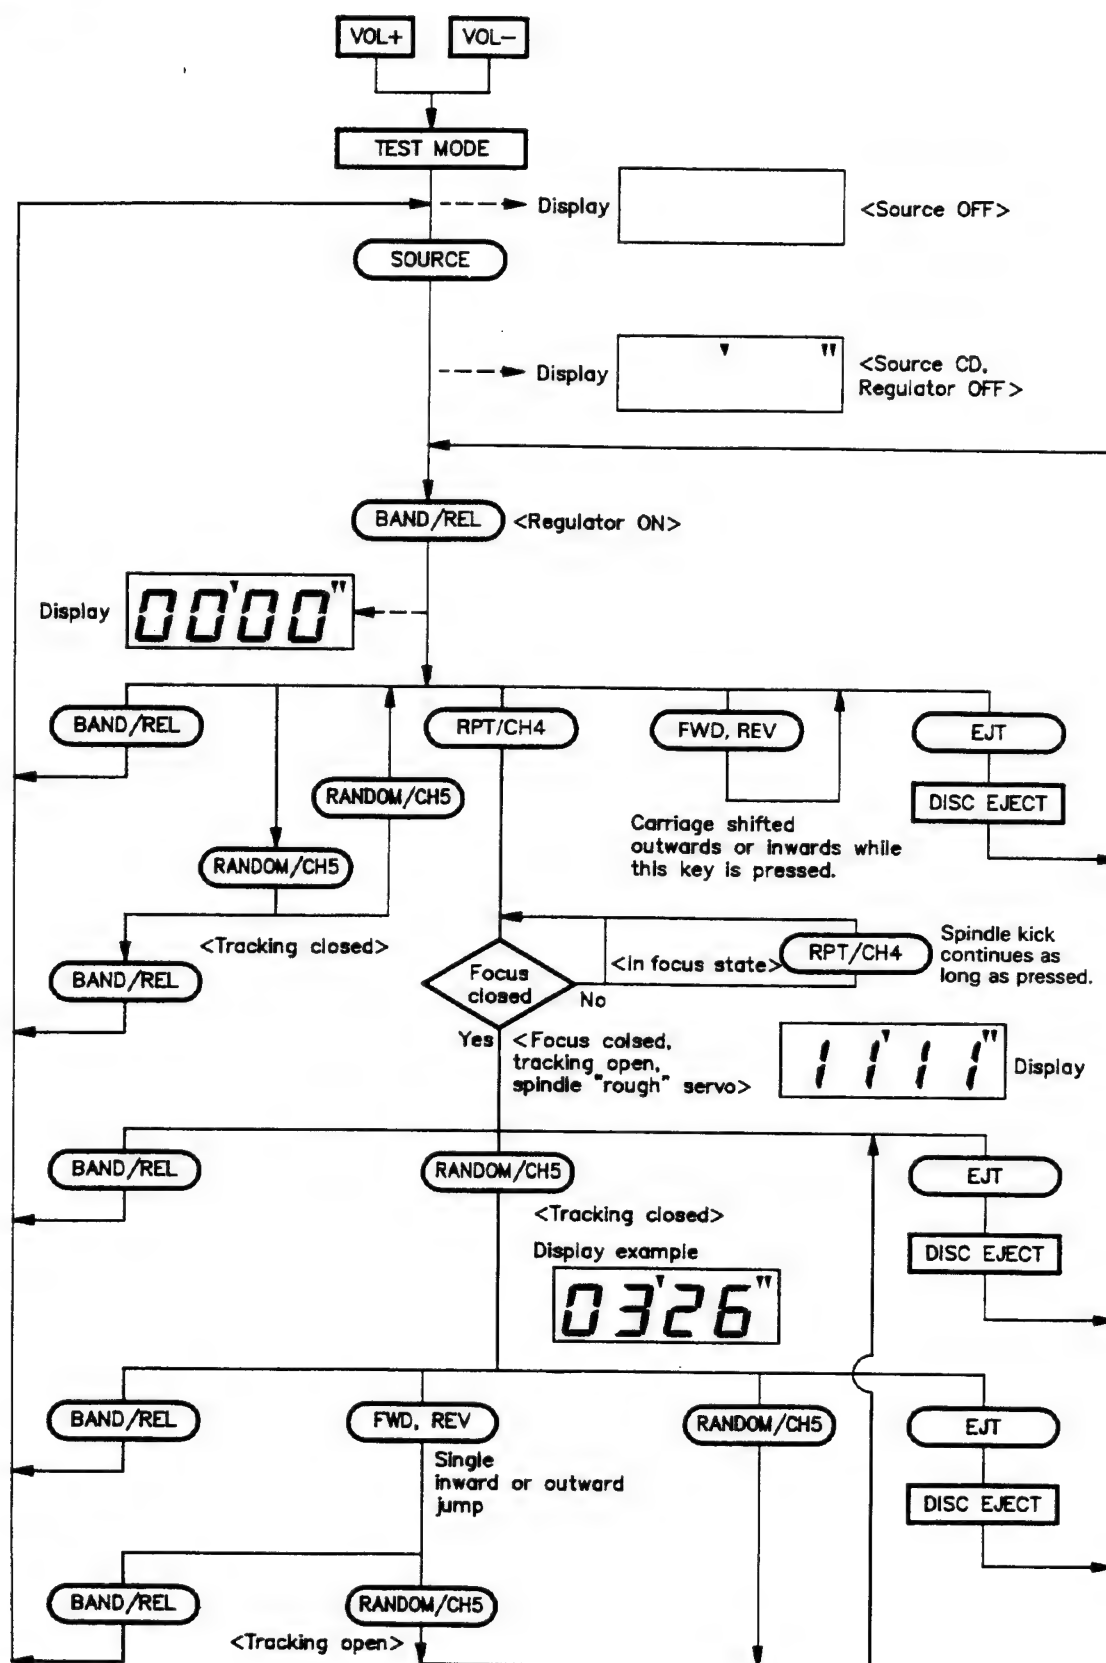

*The unit will not load a disc.

When the unit malfunctions this way, either re-position the light source, move the unit or cover the photo transistor.

Key	Function
BAND	Regulator ON/OFF

- Test Point
CD Tuner Unit (Foil side)

CD Tuner Unit (Parts mounted side)

8.1 Focus Offset Adjustment

● Purpose: To adjust the electrical offset of the focus amplifier to zero.

● Maladjustment symptoms: No focus closing

● Measuring equipment/
jigs

• Multi-meter or oscilloscope

● Measuring point

• FE02

● Test disc and setting

• No Disc

• Test mode

● Adjustment position

• VR1

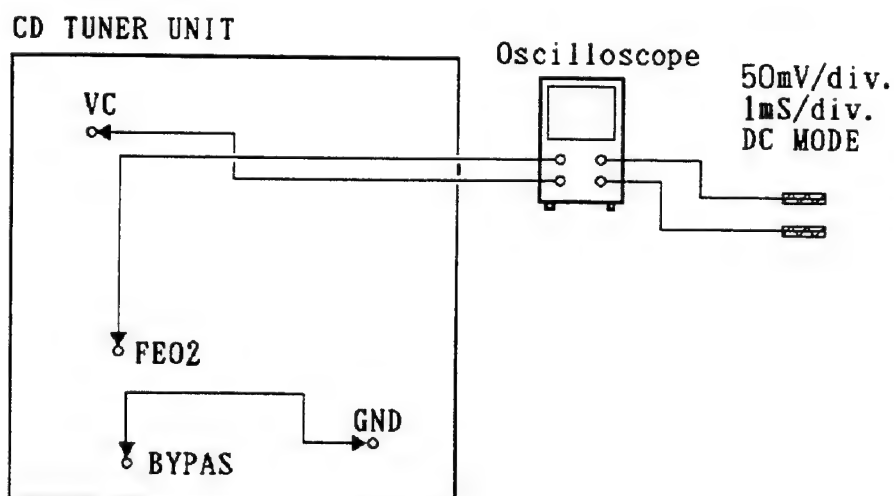

Fig. 9

(This P.C. Board connection diagram is viewed from the foil side.)

Adjustment Procedure

1. Connect BYPAS to GND.
2. Switch regulator ON.
3. Using VR1, adjust the FE02 DC voltage in reference to VC to a value of $0 \pm 25\text{mV}$.

8.2 VCO Free Run Frequency Adjustment

- **Purpose:** To adjust the EFM decoder reference clock free-run frequency to a suitable value.
- **Maladjustment symptoms:** Spindle lock not possible, distorted sound or no sound at all

- | | |
|---|--|
| <ul style="list-style-type: none"> ● Measuring equipment/jigs ● Measuring point ● Test disc and setting ● Adjustment position | <ul style="list-style-type: none"> • Frequency counter • Pin No. 70 (PLCK) of IC701 (CXD1167Q) • No Disc • Test mode • VR604 |
|---|--|

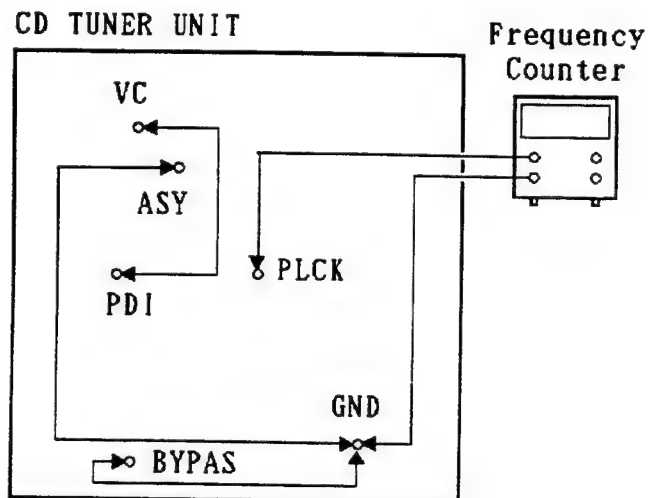

Fig. 10

Adjustment Procedure

1. Connect pin No. 7 (TP ASY) of IC351 to GND.
Connect BYPAS to GND.
 2. Connect pin No. 1 (TP VC) of IC601 to pin No. 28 (TP PDI).
 3. Switch regulator ON while in test mode.
 4. Connect the frequency counter to pin No. 70 (TP PLCK) of IC701 (CXD1167Q).
 5. Adjust VR604 to obtain a frequency of 4.45 ± 0.01 MHz.
 6. Switch regulator OFF.
 7. Disconnect the leads connecting TP VC to TP PDI, and TP ASY to GND.
- Note: Connect TP VC and TP PDI with leads kept as short as possible.
- Note: Connect the frequency counter ground to TP GND as shown in the figure.

8.3 RF Offset Adjustment

●Purpose: To adjust the RF amplifier offset to a suitable value

●Maladjustment symptoms: Focus closure fails readily

●Measuring equipment/
jigs

• Oscilloscope

●Measuring point

• RFO

●Test disc and setting

• No Disc • Test mode

●Adjustment position

• VR2 (RFO)

CD TUNER UNIT

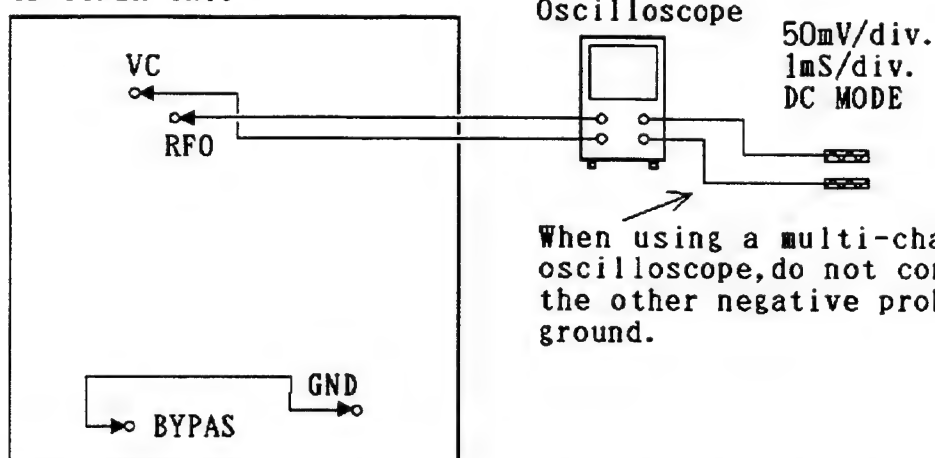

Fig. 11

Adjustment Procedure

1. Connect BYPAS to GND.
2. Switch regulator ON.
3. Using the oscilloscope, measure the RFO DC voltage in reference to VC, and adjust VR2 (RFO) to obtain a reading of $+40 \pm 10\text{mV}$.

8.4 Tracking Offset Adjustment

● Purpose: To adjust the electrical offset of the tracking amplifier to zero

● Maladjustment symptoms: Search times too long, carriage run-away

● Measuring equipment/
jigs

• Oscilloscope

● Measuring point

• TAO low-pass filter output

● Test disc and setting

• No Disc • Test mode

● Adjustment position

• VR3 (T0)

CD TUNER UNIT

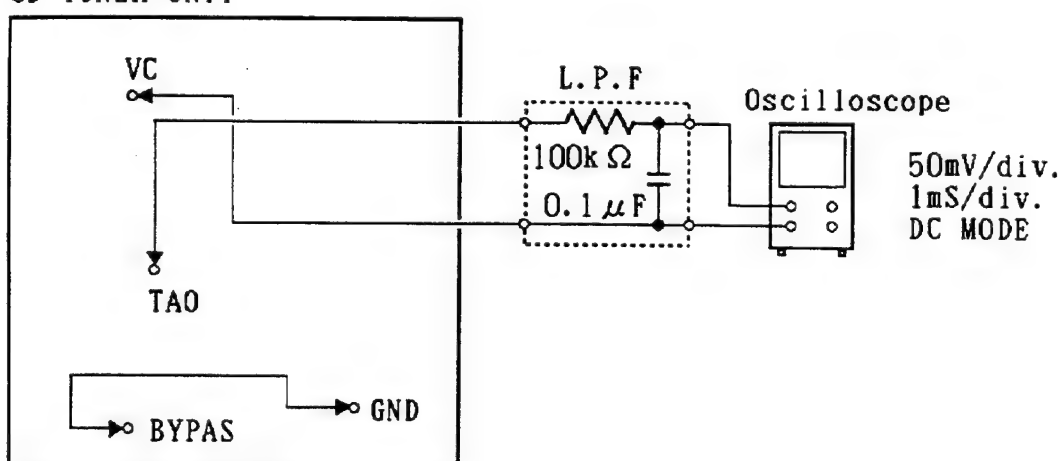

Fig. 12

Adjustment Procedure

1. Insert a low-pass filter between TAO and VC.
2. Check that BYPAS is connected to GND.
3. Switch regulator ON.
4. Using the oscilloscope, measure the TAO LPF output DC voltage in reference to VC, and adjust VR3 (T0) to obtain a reading of $0 \pm 25\text{mV}$.

The low-pass filter may be left in place for later adjustments.

8.5 TE Offset Adjustment-1

●Purpose: To adjust the electrical offset of the tracking servo to zero.

●Maladjustment symptoms: Search times too long, carriage run-away

●Measuring equipment/
jigs

• DC voltmeter

●Measuring point

• TAO low-pass filter output

●Test disc and setting

• No Disc • Test mode

●Adjustment position

• VR4 (TE0)

CD TUNER UNIT

Fig. 13

Adjustment Procedure

1. Check that BYPAS is connected to GND.
2. Switch regulator ON while in test mode.
3. Press the **RANDOM/CH5** key to close tracking.
4. Using VR4 (TE0), adjust the TAO LPF output DC voltage in reference to VC to a value of 0 ± 10 mV.
5. Switch regulator OFF.

8.6 Tracking Balance Adjustment - I

- Purpose: To adjust the tracking servo offset to zero.
- Maladjustment symptoms: Search times too long, poor playability, carriage run-away

<ul style="list-style-type: none"> ● Measuring equipment/ jigs ● Measuring point ● Test disc and setting ● Adjustment position 	<ul style="list-style-type: none"> • Oscilloscope • TEY (Tracking error signal), low-pass filter output • SONY TYPE 4 (or TYPE 3) • Test mode • VR5 (T. BAL)
--	--

Fig. 14

Adjustment Procedure

1. After checking that regulator is OFF, connect the low-pass filter as shown in the diagram.
 2. Disconnect BYPAS from ground.
 3. Set the test disc (SONY TYPE 4). Switch regulator ON.
 4. Using the FWD or REV key, move the pick-up to about the center of the signal surface.
 5. Press the RPT/CH4 key to close focus.
 6. Using an oscilloscope, observe the TEY signal in respect to VC. Then adjust VR5 (T. BAL) to set the positive and negative amplitudes to the same levels. (See Fig. 15-17)
 7. Switch the power OFF.
- The low-pass filter may be left in place for later adjustments.

8.7 Tangential Skew Check

- Purpose: To check whether tangential skew has been misaligned or not when replacing the pick-up unit.
- Maladjustment symptoms: No disc playback; track jumping

- | | |
|--|--|
| <ul style="list-style-type: none"> ● Measuring equipment/
jigs ● Measuring point ● Test disc and setting ● Adjustment position | <ul style="list-style-type: none"> • Oscilloscope, screwdriver • RFO • SONY TYPE 4 (or TYPE 3) • Normal mode • Pick-up tangential adjustment screw |
|--|--|

Fig.18

Adjustment Procedure (with R379 removed)

1. Remove R379 (but reconnect after completing adjustment).
2. Play tune TNO 7 in normal mode. (TYPE 3: TNO 23)
3. Check that the valley at the 11T section of the RF waveform is flat.
4. If out of adjustment, readjust to obtain a flat RF waveform. (See Fig.19-24) Take care not to knock the pick-up with the screwdriver at this stage. (This kind of accident can result in loss of focus.)
5. Switch the power OFF and reconnect R379.
6. Apply "screw-lock" to the tangential adjustment screw.
7. After adjusting tangential skew, also adjust the grating.
8. If tangential skew is seriously out of adjustment, carriage stopping and run-away tend to occur in normal mode. In this case,
 - a) Switch to test mode.
 - b) Shift the pick-up to signal surface center using **FWD** or **REV** key.
 - c) Press the **RPT/CH4** key to close focus.
 - d) Press the **RANDOM/CH5** key to close tracking.
 - e) Observe RFO in respect to VC, and turn the tangential adjustment screw to obtain a flat waveform at the 11T section.
 - f) Repeat the adjustment resuming from step 2.

NG Fig. 19

NG Fig. 20

OK Fig. 21

OK Fig. 22

NG Fig. 23

Play tune TNO 7 (TYPE4)

NG Fig. 24

Play tune TNO 12 (TYPE4)

Adjustment Procedure (without R379 removed)

1. Play tune TNO 12 in normal mode. (TYPE 3:TNO 14)
2. Turn the tangential adjustment screw to obtain a good RF waveform eye pattern. Turn the adjustment screw both clockwise and counterclockwise to points where the eye pattern deteriorates, and take the midway point as the adjustment point. As a general guide, look for an overall clear waveform, and one of the diamond shapes in the eye pattern. The diamond shapes should appear in fine lines at the point of optimum adjustment. Take care not to knock the pick-up with the screwdriver at this stage. (This kind of accident can result in loss of focus.) (See Fig. 25-27)
3. Apply "screw-lock" to the tangential adjustment screw.
4. After adjusting tangential skew, also adjust the grating.

NG Fig. 25

OK Fig. 26

NG Fig. 27

8.8 Grating Adjustment

● Purpose: The grating may need adjustment in a replaced pick-up assembly.

● Maladjustment symptoms: No disc playback; track jumping

● Measuring equipment/
jigs

● Measuring point

● Test disc and setting

● Adjustment position

• Oscilloscope, clock driver, grating adjustment filter (bandpass filter) (GGF-133), AC millivoltmeter, two low-pass filters

• TEY, E LPF output, F LPF output

• SONY TYPE 4 (or TYPE 3) • Test mode

• Pick-up grating adjustment hole

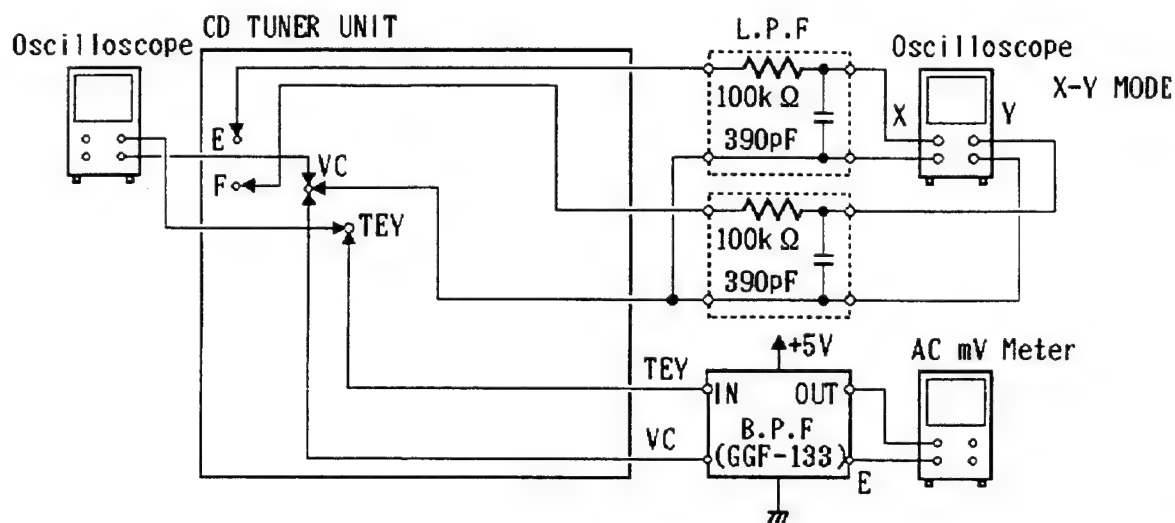

Fig. 28

Adjustment Procedure

1. Connect a low-pass filter (100k, 390p) to test points E, F, and VC as shown in the above diagram.
2. Switch regulator ON in test mode, and load a disc.
3. Press the **RPT/CH4** key to close focus.
4. Press the **RANDOM/CH5** key to close tracking.
5. Using the **FWD** or **REV** key, move the pick-up to about the center of the signal surface (tune TNO 6). (TYPE 3: TNO 7)
6. Press the **RANDOM/CH5** key to open tracking.
7. While monitoring the TEY filter output by AC milli-voltmeter, turn the grating adjustment hole slowly. The AC voltage increases and decreases while turning the screw. Search for the minimum voltage level. (This corresponds to the position where the grating is on a track, and is referred to as the null point.)
8. Then while monitoring TEY by oscilloscope, turn the driver slowly clockwise from the null point (as seen from under the pick-up) until the first waveform peak amplitude is reached. (See Fig. 30-35)

9. With the E low-pass filter output connected to the X axis of the oscilloscope, and the F low-pass filter output connected to the Y axis, apply an input in AC mode and observe the Lissajous figures.
10. Using the driver, adjust the Lissajous figure to a single line (or as close as possible)
11. Switch regulator OFF and remove the filters.

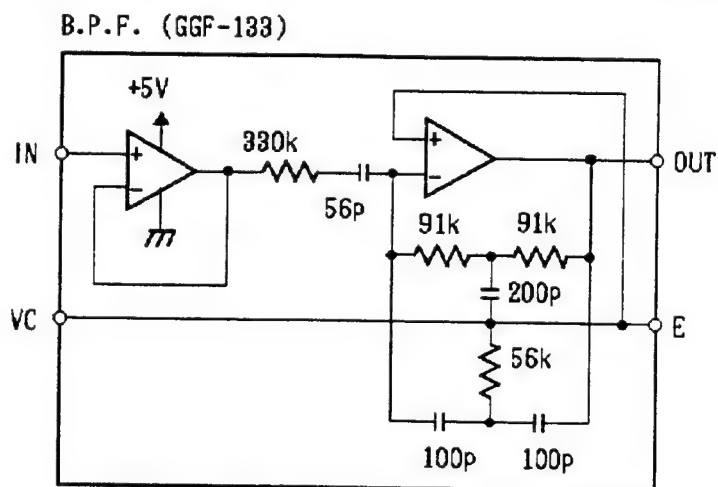

Fig. 29

TEY waveform 10ms/div, 500mV/div

Fig. 30

Null Point

Lissajous figure (AC input)
Horizontal axis E 20mV/div
Vertical axis F 20mV/div

Final adjustment

Fig. 34

Fig. 35

8.9 Focus Bias Adjustment

● Purpose: To adjust the focus servo bias to an optimum value

● Maladjustment symptoms: Focus closing difficulty, poor playability

● Measuring equipment/
jigs

• Oscilloscope

● Measuring point

• RFO

● Test disc and setting

• SONY TYPE 4 (or TYPE 3) • Normal mode

● Adjustment position

• VR6 (FEB)

CD TUNER UNIT

Fig. 36

Adjustment Procedure

1. Play tune TNO 12 in normal mode. (TYPE 3:TNO 14)
2. Observe RFO in respect to VC in the oscilloscope, and adjust VR6 (FEB) to obtain maximum RF and optimum eye pattern. (See Fig. 37 and 38)

Fig. 38

8.10 Focus Servo Loop Gain Adjustment

● **Purpose:** To adjust the focus servo loop gain to an optimum value

● **Maladjustment symptoms:** Poor playability, reduced resistance to vibration, focus closure fails readily

● **Measuring equipment/ jigs**

● **Measuring point**

● **Test disc and setting**

● **Adjustment position**

• Oscillator, gain adjustment filter (GGF-065), dual meter milli-voltmeter

• FEX, FEY

• SONY TYPE 4 (or TYPE 3) • Normal mode

• VR7 (FG)

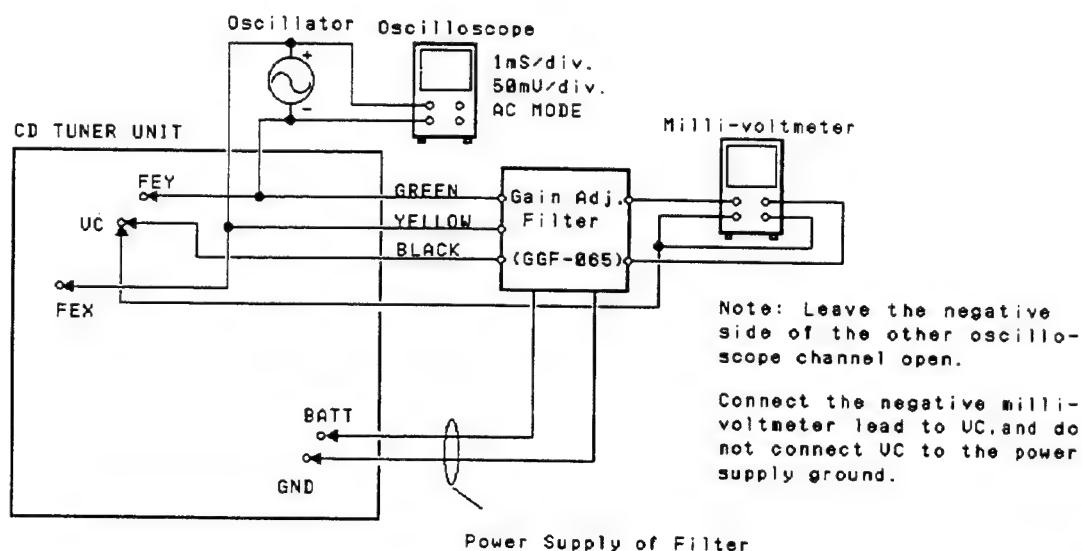

Fig. 39

Adjustment Procedure

1. After checking that the power is OFF, connect the gain adjustment filter and measuring equipment as shown in the above diagram.
2. Play tune TNO 12 in normal mode. (TYPE 3: TNO 14)
3. Set the oscillator to 1kHz, and observe the FEX/FEY output in the oscilloscope. Adjust the oscillator output to obtain a FEX/FEY output of 100mVp-p.
4. Adjust VR7 (FG) to obtain a milli-voltmeter difference of $0 \pm 0.5\text{dB}$.

8.11 Tracking Servo Loop Gain Adjustment

● Purpose: To adjust the tracking servo loop gain to an optimum value

● Maladjustment symptoms: Poor playability, reduced resistance to vibration

● Measuring equipment/
jigs

● Measuring point

● Test disc and setting

● Adjustment position

• Oscillator, gain adjustment filter (GGF-065), dual meter milli-voltmeter

• TEX, TEY

• SONY TYPE 4 (or TYPE 3) • Normal mode

• VR8 (TG)

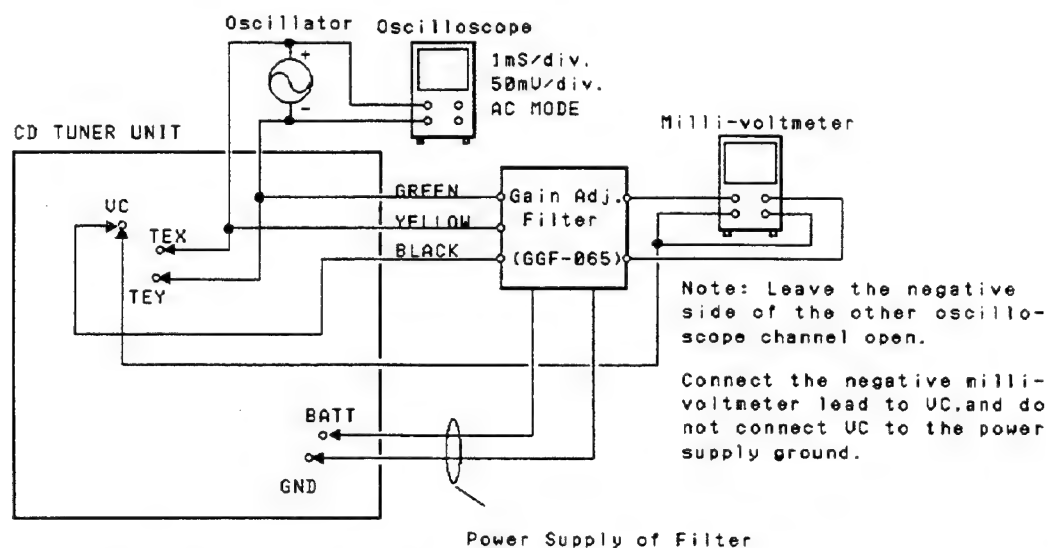

Fig. 40

Adjustment Procedure

1. After checking that the power is OFF, connect the gain adjustment filter and measuring equipment as shown in the above diagram.
2. Play tune TNO 12 in normal mode. (TYPE 3: TNO 14)
3. Set the oscillator to 1.4kHz, and observe the TEX/TEY output in the oscilloscope. Adjust the oscillator output to obtain a TEX/TEY output of 100mVp-p.
4. Adjust VR8 (TG) to obtain a milli-voltmeter difference of 0 ± 0.5 dB.

8.12 TE Offset Adjustment-II

● Purpose: To adjust the electrical offset of the tracking servo to zero.

● Maladjustment symptoms: Search times too long, carriage run-away

● Measuring equipment/
jigs

• DC voltmeter

● Measuring point

• TAO low-pass filter output

● Test disc and setting

• Empty magazine • Test mode

● Adjustment position

• VR4

Adjustment Procedure

Same as for TE offset adjustment-I, but with the DC voltage of the TAO LPF output adjusted to $0 \pm 50\text{mV}$.

The purpose of this additional adjustment is to correct any deviations generated when carrying out the tracking balance and tracking servo loop gain adjustments after completing TE offset adjustment-I.

8.13 Tracking Balance Adjustment - II

- Purpose: To adjust the tracking servo offset to zero.
- Maladjustment symptoms: Search times too long, poor playability, carriage run-away

● Measuring equipment/ jigs	• Oscilloscope
● Measuring point	• TEY low-pass filter output
● Test disc and setting	• SONY TYPE 4 (or TYPE 3) • Test mode
● Adjustment position	• VR5

Adjustment Procedure

- Steps 1 thru 5 same as tracking balance adjustment-I.
6. Check that the level difference between the positive and negative amplitudes of the TEY signal is within 5% (See Fig. 15-17). If greater than 5%, adjust with VR5.
 7. If further adjustment was necessary in step 6, repeat TE offset adjustment-II.

8.14 Clock Adjustment (UC, US, ES Model)

● **Purpose:** To adjust the clock frequency to a suitable value

- | | |
|--|-------------------------|
| ● Measuring equipment/
jigs | • Frequency counter |
| ● Measuring point | • CLOCK |
| ● setting | • Clock adjustment mode |
| ● Adjustment position | • C754 |

CD TUNER UNIT

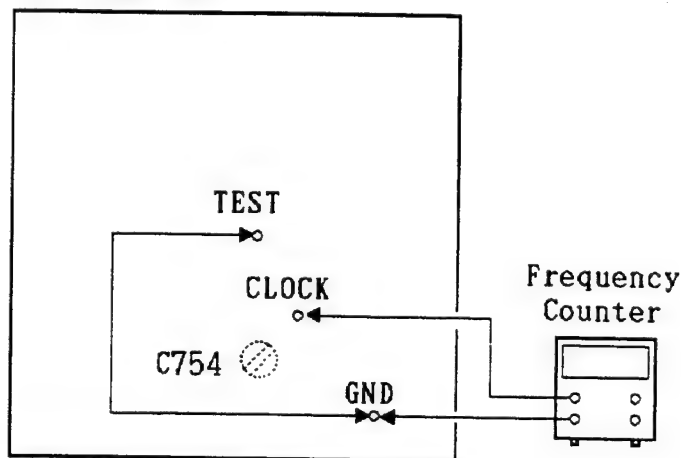

Fig. 41

Adjustment Procedure

1. Switch ACC, BACK-UP ON.
2. Connect TEST to GND. (Clock adjustment mode)
3. Connect the frequency counter to CLOCK.
4. Adjust C754 to obtain a frequency of $1,048,567\text{Hz} \pm 2\text{Hz}$.

8.15 Tuner Adjustment

• Connection Diagram

NOTICE: Select C1 so that total capacity of 80pF attained from the direction of the receiver jack.
Z: Output impedance of SSG.

IC651: AN8377N

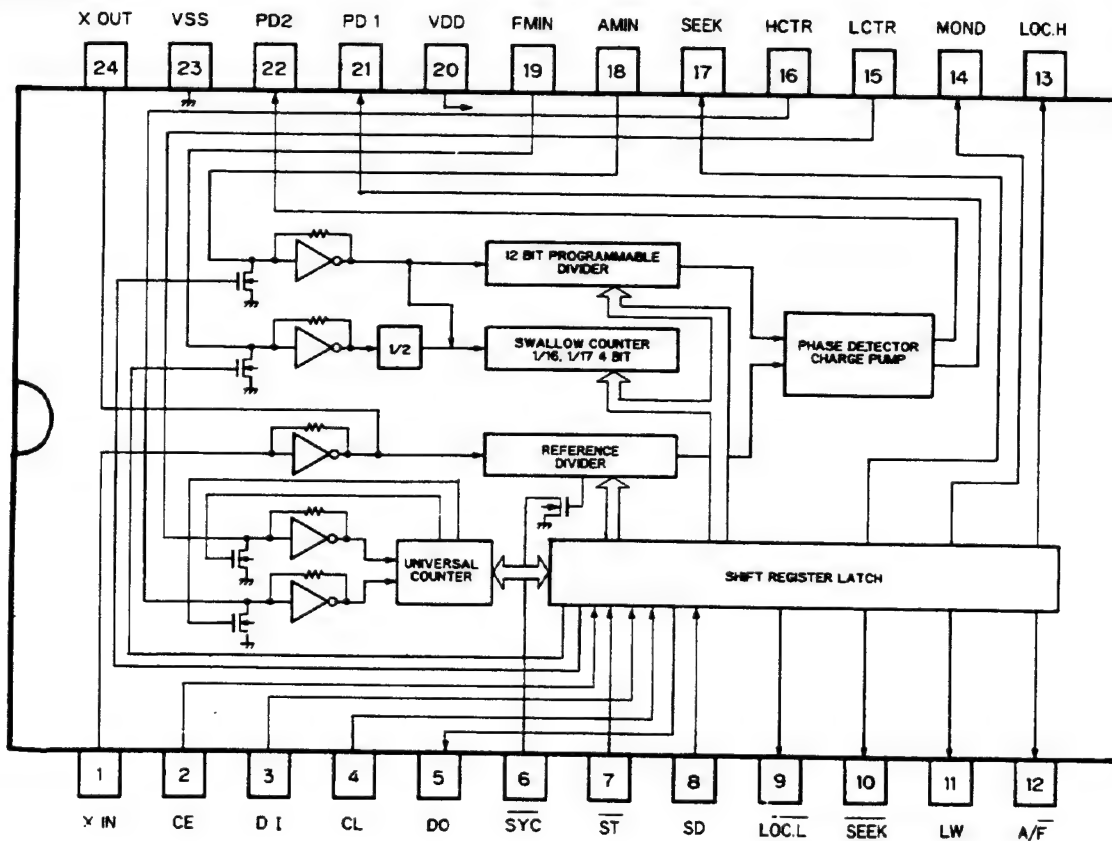

• Pin Functions (AN8377N)

Pin	Pin name	I/O	Function and Operation
1	PVCC		Driver power supply
2	VCC		Power supply
3	TB	input	Transistor base input
4	VMON	output	5V regulator output
5	TAIN	input	Actuator driver 1 error input
6	SMIN	input	Motor driver 2 error input
7	CMIN	input	Motor driver 3 error input
8	VREF	input	Vref input
9	CM-	output	Motor driver 3 inverter output
10	CM+	output	Motor driver 3 non-inverting output
11	SM-	output	Motor driver 2 inverter output
12	SM+	output	Motor driver 2 non-inverting output
13	TA-	output	Actuator driver 1 inverter output
14	TA+	output	Actuator driver 1 non-inverting output
15	RST	output	Reset output
16	PC		PC input

IC452: CWW1213

IC501: LC7218M

* IC701: CXD1167Q

● Pin Functions (CXD1167Q)

Pin No.	Pin Name	I/O	Function and Operation
1	FSW	Output	Spindle motor output filter time constant selector output
2	MON	Output	Spindle motor ON/OFF control output
3	MDP	Output	Spindle-motor drive output - "rough" control in CLV-S mode, and phase control in CLV-P mode
4	MDS	Output	Spindle motor drive output - speed control in CLV-P mode
5	EFM	Input	EFM signal input from RF amplifier
6	ASY	Output	EFM signal slice level control output
7	LOCK	Output	Sampling of GFS signal by WFCK/16 - "H" output if "H", "L" output if "L" detected eight times in succession
8	VCOO	Output	VCO output - $f = 8.6436\text{MHz}$ when EFM signal is locked
9	VCOI	Input	VCO input
10	TEST	Input	(0V)
11	PDO	Output	EFM signal and VCO/2 phase comparison output
12	V _{SS}	—	Ground (0V)
13	CLK	Input	Serial data transfer clock input from CPU - data latched by clock leading edge
14	XLT	Input	Latch input from CPU - 8-bit shift register data (serial data from CPU) is latched in each register.
15	DATA	Input	Serial data input from CPU
16	XRST	Input	System reset signal input - reset when "L"
17	CNIN	Input	Tracking pulse input
18	SENS	Output	Output of internal status according to address
19	MUTG	Input	Muting input - when ATTM of internal register A is "L", MUTG "L" denotes normal status, and "H" muted status
20	CRCF	Output	Sub-code Q CRC check result output
21	EXCK	Input	Clock input for sub-code serial output
22	SBSO	Output	Sub-code serial output
23	SUBQ	Output	Sub-code Q output
24	SCOR	Output	Sub-code synchronizing S0 + S1 output
25	SQCK	Input/Output	Sub-code Q read clock
26	SQEX	Input	SQCK selector input
27	DOTX	Output	Digital out output (WFCK output)
28	GFS	Output	Frame synchronizing lock status indicator output
29	B8	Input	Connected to GND
30	B7	Input	Connected to GND
31	B6	Input	Connected to GND
32	B5	Input	Connected to GND
33	V _{DD}	—	Power supply (+5V)
34	B4	Input	Connected to GND
35	B3	Input	Connected to GND

Pin No.	Pin Name	I/O	Function and Operation
36	B2	Input	Connected to GND
37	B1	Input	Connected to GND
38	A1	Input	Connected to GND
39	A2	Input	Connected to GND
40	A3	Input	Connected to GND
41	A4	Input	Connected to GND
42	A5	Input	Connected to GND
43	A6	Input	Connected to GND
44	A7	Input	Connected to GND
45	A8	Input	Connected to GND
46	A9	Input	Connected to GND
47	A10	Input	Connected to GND
48	A11	Input	Connected to GND
49	WE	Output	External RAM write enable signal output (active "L")
50	CS	Output	External RAM chip select signal output (active "L")
51	C4M	Output	X'tal frequency division output ($f = 4.2336\text{MHz}$)
52	V _{SS}	—	Ground (0V)
53	XTAI	Input	Crystal oscillator Input
54	XTAO	Output	Crystal oscillator output
55	MD1	Input	Mode selector input 1
56	MD2	Input	Mode selector input 2
57	MD3	Input	Mode selector input 3
58	SLOB	Input	Audio data output code selector input - 2's complement output "L", offset binary output if "H"
59	PSSL	Input	Audio data output mode selector input - serial output if "L", parallel output if "H"
60	SHR	Output	Aperture correction control output - "H" when right channel
61	SHL	Output	Aperture correction control output - "L" when left channel
62	C1F1	Output	C1F1 output
63	C1F2	Output	C1F2 output
64	C2F1	Output	C2F1 output
65	C2F2	Output	C2F2 output
66	C2FL	Output	C2FL output
67	C2PO	Output	C2PO output
68	RFCK	Output	RFCK output
69	WFCK	Output	WFCK output
70	PLCK	Output	PLCK output
71	UGFS	Output	UGFS output
72	GTOP	Output	GTOP output

Pin No.	Pin Name	I/O	Function and Operation
73	V _{DD}	—	Power supply (+ 5V)
74	RAOV	Output	RAOV output
75	C4LR	Output	C4LR output
76	$\overline{\text{BCLK}}$	Output	$\overline{\text{C210}}$ output
77	C210	Output	C210 output
78	DATA	Output	DATA output
79	WDCK	Output	Strobe signal output
80	LRCK	Output	Strobe signal output

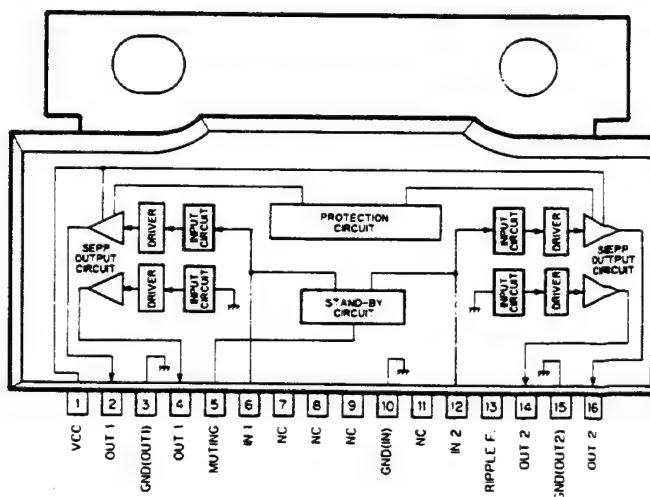

Note:

C1F1: C1 decoding error correction status monitor output
 C1F2: C1 decoding error correction status monitor output
 C2F1: C2 decoding error correction status monitor output
 C2F2: C2 decoding error correction status monitor output
 C2FL: Corrected status output - "H" if C2 system currently being corrected cannot be corrected
 C2PO: C2 pointer indication output - synchronized with audio data output
 RFCK: Read frame clock output - crystal oscillator 7.35kHz
 WFCK: Write frame clock output - $f = 7.35\text{kHz}$ when crystal oscillator is locked
 PLCK: VCO/2 output - $f = 4.3218\text{MHz}$ when EFM signal is locked
 UGFS: Unprotected frame synchronizing pattern output
 GTP: Frame synchronization protection status indicator output
 RAOV: ± 4 frame jitter absorption RAM overflow and underflow indicator output
 C4LR: Strobe signal
 BCLK: C210 inverting output
 C210: Bit clock output
 DATA: Audio signal serial data output

IC551: AN7188K

* IC601: CXA1082BQ

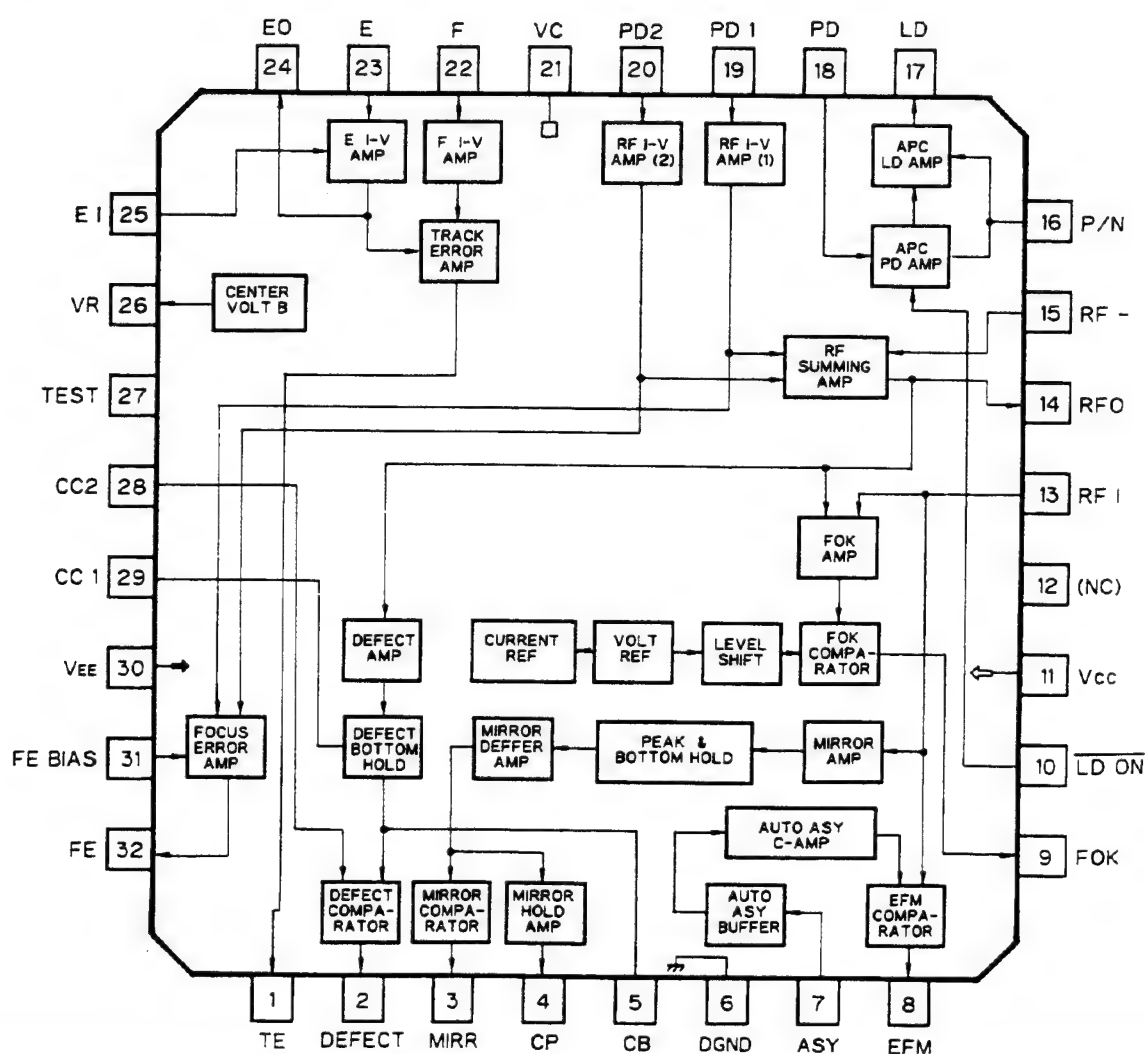

● Pin Functions (CXA1082BQ)

Pin No.	Pin Name	I/O	Function and Operation
1	VC		Servo reference voltage input pin
2	FGD		Connect to pin 3 to switch focus servo OFF when defect occurs
3	FS3		Internal DFCT switch closed when pin 44 is high
4	FLB		Focus servo low region boost external time constant pin
5	FEO	Output	Focus drive output - connect to low-end equalizer
6	FE-	Input	Focus amplifier inverter input pin
7	SRCH		Focus search waveform generation external time constant connector pin
8	TGU	Output	Tracking low-end equalizer connection output pin
9	TG2		Pin 7 discharge switch for starting focus search from lens center
10	AVCC		+ 5V connection
11	TAO	Output	Tracking drive output
12	TA-	Input	Tracking amplifier inverter input pin
13	SL+	Input	Sled amplifier non-inverting input pin
14	SLO	Output	Sled drive output
15	SL-	Input	Sled amplifier inverter input pin
16	HOME	Input	Sled home position detector switch input pin
17	FSET		Focus/tracking phase compensation peak and CLV low-pass filter f_0 setting pin
18	SENS	Output	Output of FZC, AS, TZC, SSTOP, and BUSY depending on command from CPU
19	AVEE		AGND connection
20	COUT	Output	Track counter signal output
21	DIRC		Not used
22	XRST	Input	Reset input pin - reset when "L"
23	DATA	Input	Serial data input from CPU
24	XLT	Input	Latch input from CPU
25	CLK	Input	Serial data transfer clock input from CPU
26	DGND		DGND connection
27	BW1		Loop filter external time constant pin
28	PDI	Input	Input of CXD1135 phase comparator output PDO
29	ISSET		Current which determines focus search, track jump, and sled kick height
30	VCOF		VCO free-running frequency more or less inversely
31	3.5V	Output	Proportional to resistance value between pins 30 and 31
32	C864	Output	8.64MHz VCO output pin
33	LOCK		Not used
34	MDP		Connect to MDP pin of CXD1135
35	MON		Connect to MON pin of CXD1135
36	FSW		CLV servo error signal low-pass filter external time constant pin
37	DVCC		+ 5V connection
38	SPDL-	Input	Spindle drive amplifier inverter input pin

Pin No.	Pin Name	I/O	Function and Operation
39	SPDLO	Output	Spindle drive output
40	WDCK	Input	Auto-sequence clock input 176.4kHz
41	FOK	Input	FOK signal input pin
42	MIRR	Input	Mirror signal input pin
43	DVEE		DGND connection
44	DFCT	Input	DEFECT signal input pin - defect countermeasure circuit activated when this input is high
45	TE	Input	Tracking error signal input pin
46	TZC	Input	Tracking zero-cross comparator input pin
47	ATSC	Input	Tracking lens offset detector window comparator input pin
48	FE	Input	Focus error signal input pin

• IC351: CXA1081Q

● Pin Functions (CXA1081Q)

Pin No.	Pin. Name	I/O	Function and Operation
1	TE	Output	Tracking error amplifier output pin
2	DEFECT	Output	DEFECT comparator output pin
3	MIRR	Output	MIRR comparator output pin
4	CP	Input	MIRR hold capacitor connector pin - MIRR comparator non-inverting input pin
5	CB	Input	DEFECT bottom hold capacitor connector pin
6	DGND		Ground connection
7	ASY	Input	Auto asymmetry control input pin
8	EFM	Output	EFM comparator output pin
9	FOK	Output	Focus OK comparator output pin
10	LDON	Input	Laser diode ON/OFF switching
11	VCC		Positive power supply pin
12	NC		
13	RFI	Input	Input of capacitance-coupled RF summing amplifier output
14	RFO	Output	RF summing amplifier output pin - eye pattern check point
15	RF-	Input	RF summing amplifier feedback input pin
16	P/N	Input	Laser diode P-sub/N-sub selector pin
17	LD	Output	APC LD amplifier output pin
18	PD	Input	APC PD amplifier input pin
19	PD1	Input	RF I-V amplifier (1) inverter input pin - connected to photodiode A + C pin for current input
20	PD2	Input	RF I-V amplifier (2) inverter input pin - connected to photodiode B + D pin for current input
21	VC		Connected to VR
22	F	Input	I-V amplifier inverter input pin - connected to photodiode for current input
23	E	Input	I-V amplifier inverter input pin - connected to photodiode for current input
24	EO	Output	E I-V amplifier output pin
25	EI	Input	E I-V amplifier feedback input for E I-V amplifier gain adjustment
26	VR	Output	$(V_{CC} + V_{EE})/2$ DC voltage output pin
27	TEST		Open
28	CC2	Input	Input of capacitance-coupled DEFECT bottom hold output
29	CC1	Output	DEFECT bottom hold output pin
30	VEE		Ground connection
31	FE BIAS	Input	Focus error amplifier non-inverting bias pin Used in focus error amplifier CMR adjustment
32	FE	Output	Focus error amplifier output pin

IC961: PA2018

• Pin Functions (PA2018)

Pin No.	Pin Name	I/O	Function and Operation
1	GND		GND (ref) Reference GND
2	ACC	Input	Connected to accessory power supply of a car
3	r1	Input	Connected with external capacity for VDD backup
4	r2	Input	Connected with external capacity and used for setting of the operation time of the overcurrent protective function
5	r3	Input	Connected with external capacity and used for setting of the delay time of MUTE OUT
6	MUTEOUT	Output	MUTE circuit control output
7	BU	Input	Connected to car backup power supply
8	BU	Input	Connected to car backup power supply
9	STBYB	Output	Power amplifier control signal output
10	SYSB	Output	Stabilized power output for circuits (sound quality, sound volume, balance, etc.) common to the system
11	TAPEB	Output	Stabilized power output for cassette deck circuit (equalizer amplifier, etc.)
12	GND(A)		Analog GND
13	GND(A)		Analog GND
14	AMB	Output	Stabilized power output for AM tuner circuit
15	FMB	Output	Stabilized power output for FM tuner circuit
16	GND(D)	Output	Digital GND
17	VCC5V	Output	Stabilized power output used for microcomputer interface circuit
18	MUTE	Input	MUTE control input from the outside (MUTE OUT at H for input of L)
19	PWA	Input	Input for output selection, which controls the output with three bit signals of PWA, PWB, and PWC
20	PWB	Input	
21	PWC	Input	
22	ASENS	Output	ACC line voltage detection output (H for voltage detection)
23	BSSENS	Output	BU line voltage detection output (H for voltage detection)
24	STBYPW	Output	Terminal for internal circuit which is connected with external capacity
25	VDD	Output	Stabilized power output for microcomputer, with backup and overcurrent protection functions

DECODER LOGIC (PA2018)

HI2
detection

1. MUTE operation start control
2. Audio system power output start control

MID
detection

1. Control of operation of microcomputer and control systems
2. Audio system power output stop control

LOW1
detection

1. MUTE operation control
2. Control of low current consumption mode

Overvoltage
detection

1. Control of outputs other than VDD

• **Output from power IC (PA2018) to microcomputer system**

- 1) VDD: Normally output according to the voltage of $\tau 1$
 2) VCC: Output when BU is above the MID detection voltage and ACC is above the MID detection voltage.
 <VCC output requirements>

**BU \geq MID detection
ACC \geq MID detection**

- 3) A sens: H output when BU is above the MID detection voltage and ACC is above the MID detection voltage.
 L output when above requirements are not met
 <A sens H-output requirements>

**BU \geq MID detection
ACC \geq MID detection**

- 4) B Sens: H output when BU is above the MID detection voltage
 L output when the above requirement is not met
 <B sens H-output requirement>

BU \geq MID detection

• **Output from power IC (PA2018)**

- 1) SYSB, TAPEB, FMB, AMB:

Hysteresis operation (See the figure below)

ON with HI2 detection voltage and OFF with MID detection voltage

ON: When BU is above the HI2 detection voltage and ACC is above the HI2 detection voltage and when any one of inputs (A, B, and C) for output selection is H
 <ON requirements>

**BU \geq HI2 detection
ACC \geq HI2 detection
A or B or C = H**

OFF: When BU is less than the MID detection voltage or ACC is less than the MID detection voltage or when all of inputs (A, B, and C) for output selection are L
 <OFF requirements>

**BU < MID detection
ACC < MID detection
A and B and C = L**

- * For the output state of inputs (A, B, and C) for output selection, refer to the attached material 1. Decoder Logic.

Fig. 45

- 2) STBY B: Output in synchronization with SYSB

- 3) MUTE OUT

Normal operation (See the figure below)

Hysteresis operation

ON with HI2 detection voltage and OFF with HI1 detection voltage

ON: ① When BU is less than the HI2 detection voltage and ACC is above the LOW1 detection voltage
 or
 when ACC is less than the HI2 detection voltage and
 ACC is above the LOW1 detection voltage
 <ON requirements>

**BU < HI2 detection
ACC \geq LOW 1 detection**
**ACC < HI2 detection
ACC \geq LOW1 detection**

② When MUTE input is L

OFF: ① When BU is above the HI1 detection voltage and ACC is above HI1 detection voltage
 ② When ACC is less than the LOW1 detection voltage
 <OFF requirements>

**BU \geq HI1 detection
ACC \geq HI1 detection**
ACC < LOW1 detection

Fig 46

Delay operation (See the figure below)

The time period during which either BU or ACC remains below the MID detection voltage is represented by "T". Two time periods determined from the external capacity of $\tau 3$ terminal are respectively represented by T3A and T3B.

① $T \geq T3B$

Delay MUTE OUT ON for a period from rise of BU and ACC above the MID detection voltage up to the end of T3A

② $T < T3B$

MUTE OUT not performing delay MUTE OUT up to the end of T3A in (1).

Operation time with the external capacity (condenser) connected to $\tau 3$:

T3A: about 30ms at 0.1μ

T3B: about 30ms at 0.1μ ($T3A = T3B$)

- * When L is input to the MUTE terminal, with MUTE OUT OFF and BU and ACC between HI1 and HI2 detection voltages, MUTE OUT is turned ON. When the MUTE terminal changes from L to H in this state, MUTE OUT remains ON. This ON state is canceled and MUTE OUT is turned OFF when BU and ACC rise above the HI1 detection voltage.

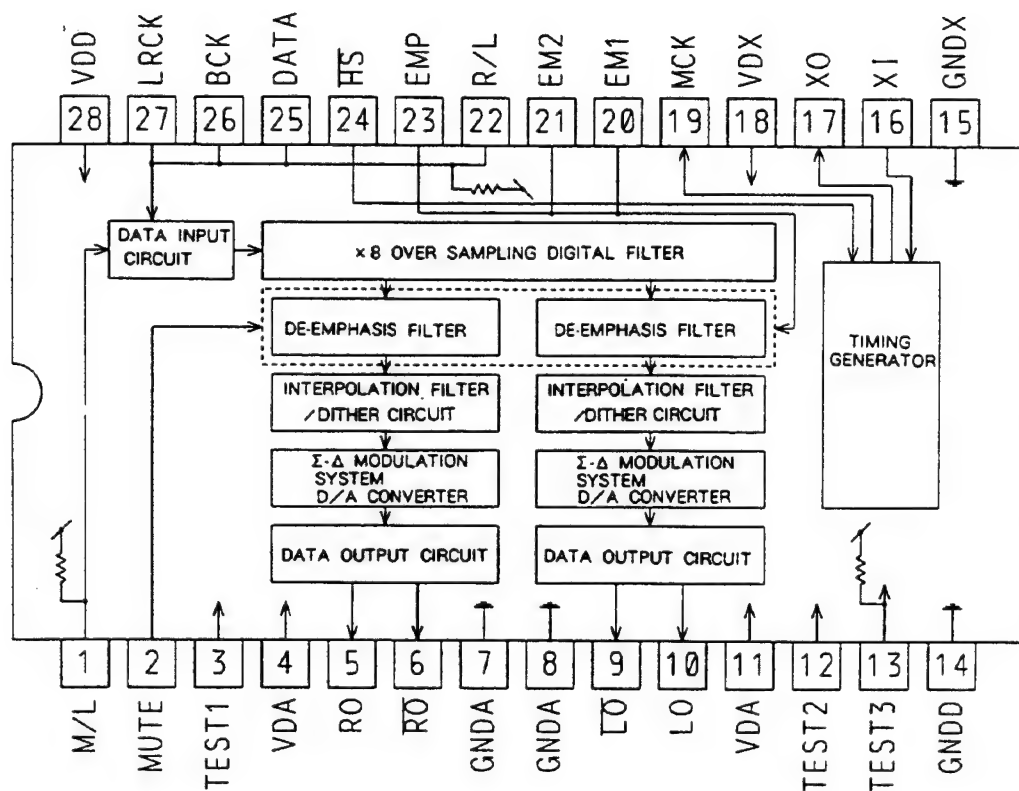

Fig. 47

IC703: TC9237F

IC704: TA2009F

* IC751: PD4306

IC's marked by * are MOS type.
Be careful in handling them because they are very liable to be damaged by electrostatic induction.

Service Manual

**SERVICE GUIDE
ORDER NO.
CRT 1161**

CD MECHANISM UNIT

CX-173

- This service manual is a description of the CD mechanism found in the model numbers listed in the table below.
- When performing repairs use this manual together with the specific manual for the model under repair.

Model	Service Manual
DEH-66/UC	CRT1166
DEH-66SDK/WG	
DEH-66/EW	
DEH-66/EI	

1. DISASSEMBLY

• Disassembly of the Carriage Unit

Note: There may be times when the names of parts used in this manual are not the same as those used in the lists accompanying the Exploded View. If a different name is used here, the part name given in the Exploded View is also provided in parentheses ().

Fig. 1

1. Put the mechanism unit into a loading complete state. (Move the lever back and rotate the gear while pressing down lightly on the arm unit. Rotate the gear until the three carriage unit shafts are free and the unit is supported by the four damper units.
2. Remove Spring A and two Springs B.
3. Remove the flexible circuit board from the flexible circuit board brace.

Fig. 2

4. Turn the mechanism unit upside down.
5. Remove the two Springs C.
6. Remove the two flexible circuit boards from their connectors.
7. Remove the two Screws A.

Fig. 3

8. Lift the lock arm assembly and then pull out the carriage unit.
9. Remove the carriage unit from the lock arm assembly.
Note: The damper units are lined with a thin rubber film. Be careful not to damage this when disassembling.

● Disassembly of the Carriage Motor Unit

Fig. 4

1. After removing the Screw B and Screw C, remove the bracket unit. At this time remove the flexible circuit board from the flexible circuit board brace.
2. Remove the belt.
3. Cock the PU unit spring as shown in Fig. 4 and then move the PU unit to its outermost position. (Cocking the spring disengages the screw unit so that the PU unit can be moved by hand from above.)
4. Pull the screw unit out of the assembly.
5. Remove the two Screws D and then the carriage motor unit.
Note: When reinstalling the carriage motor unit, tighten Screw D and seal it.

• Disassembly of the PU Unit

Fig. 5

1. Cock the PU unit spring as shown in Fig. 4. Move the PU unit to the center of the shaft for easy removal.
2. Remove the two Screws E and then the holders.
3. Remove the PU unit, lifting it from the shaft side where the holders have been removed and being careful not to catch the shaft on the opposite side.
4. Pull the shaft out of the PU unit.

• Disassembly of the Spindle Motor Unit

Fig. 6

1. Remove the two Screws F and then remove the holder unit from the PU unit.
2. Cock the PU unit spring as shown in Fig. 4 and move the PU unit to its outermost position.
3. Turn the whole carriage unit right side up.
4. Remove Screw D and turn the arm unit upside down.
5. Turn the spindle motor plate so that the holes on the plate are at the position of the screws underneath.
6. Remove the two Screws G.
Note: When reinstalling the spindle motor unit, tighten the Screws G and seal them.
7. Slide the spindle motor unit onto its side and remove it.

● Disassembly of the Loading Motor Unit

Fig. 7

1. Remove the carriage unit.
(Refer to the previous section entitled, "Disassembly of the Carriage Unit.")
2. Remove the flexible circuit board brace.
3. Remove Screw H and then the holder.
Note: When Screw H is removed, the collar will also come free. Be sure not to lose it.

4. Remove the Screw E.
5. Remove the two Washers A and then the arm unit.
6. Remove the stop washer and then the gear.
7. Remove Screw I and then the gear.
8. Remove Screw J and then the bracket.

9. Remove Spring F.
10. Remove washer B.
11. Remove the two Screws K and then pull out the bracket unit.

Note: The bearing at the tip of the roller will also come loose. Be careful not to lose it.

Fig. 8

12. Remove the two Screws L and then the loading motor unit.

Fig. 9

2. MECHANISM DESCRIPTION

• Loading Operation

Fig. 10

1. When a disc is inserted into the unit, it enters between the LED and the phototransistor with the result that the light from the LED to the phototransistor is blocked.
2. When the phototransistor detects a disc presence in the unit, the loading motor begins to rotate and loading begins.
3. When the loading motor rotates, the roller is turned and the disc is moved into the unit. (Fig. 11)

Fig. 11

Fig. 12

4. When the disc pushes on the lever, the gear shaft lock is released. The gear meshes with another internal toothed gear and is lowered. (See Figs. 12, 13)
5. The action of the gear shaft moving down lowers the disc clamp and the disc is held in place.
6. As the gear is lowered when it meshes with the internal toothed gear, the gear unit also is lowered and the disc set switch pressed.

7. At the same time, the disc door is lowered and the disc insert door is blocked to prevent the introduction of another disc.

The three shafts of the carriage unit are in a free mode and the carriage unit is in an anti-vibration mode supported by the four damper units. (Fig. 14)

When the disc set switch is turned on, loading motor rotation stops and the loading operation is complete.

Fig. 13

Fig. 14

(view of reverse side)

Free the carriage unit by disengaging the shaft lock.

Fig. 15
